---

## SKILLS SUMMARY

---

**Programming/Development:** C# | Python | Javascript | HTML | CSS | OOP

**Frameworks/Libraries:** .NET | MVC | Entity Framework | JQuery | Django | React | Bootstrap | API's

**Database:** MS SQL Server | SQL | SQLite

**IDEs:** Visual Studio | IDLE | Pycharm | SSMS

**Project Management:** Azure DevOps | CI | Agile | Scrum

**Version Control:** GitHub | GIT BASH

**Business Domains:** Warehouse Production Software

**Non-Technical:** Strategic | Leadership Experienced | Approachable | Accuracy-Centric | Puzzle solver  
Rapid Learner | Growth Minded | Collaborative

## CODING PROJECTS & EXPERIENCE SUMMARY

---

- **.NET, MVC, C#, HTML, CSS :** Web App CMS Theater website - I contributed to the existing code base in an Agile/Scrum team of 5+ devs utilizing VS & Azure DevOps. I built the rental section.  
[https://github.com/TravLord/Prosper\\_I.T.\\_Consulting\\_Internship-CMS\\_CodeSummary](https://github.com/TravLord/Prosper_I.T._Consulting_Internship-CMS_CodeSummary)
  - **Django, MVC, Python, JavaScript, HTML, CSS :** MVC Web App Appbuilder 9000 - An app for tracking collectable items. Built with a team of 10+ devs using PyCharm & Azure Devops practicing Agile/Scrum methodologies. I built an app tracking Exercise Equipment items.  
[https://github.com/TravLord/Prosper\\_I.T.\\_Consulting\\_Internship-CodeSummary](https://github.com/TravLord/Prosper_I.T._Consulting_Internship-CodeSummary)
  - **Python :** File Transfer App Tkinter GUI- User selects directory to export files from & directory to receive imported files. Only files that have been modified or created within the last 24hrs are exported. [https://github.com/TravLord/Python\\_Projects/tree/main/File\\_Transfer\\_Modify](https://github.com/TravLord/Python_Projects/tree/main/File_Transfer_Modify)
  - **JavaScript :** Tic Tac Toe Game - User against program. Randomized placement, auto restart.  
[https://github.com/TravLord/JavaScript\\_Projects/blob/main/TicTacToe\\_folder/js/tictactoe.js](https://github.com/TravLord/JavaScript_Projects/blob/main/TicTacToe_folder/js/tictactoe.js)
  - **JavaScript :** To Do List App - User input is retrieved & converted to JSON object, then converted to JSON string which is then concatenated with a remove button & added to a HTML ordered list for display. [https://github.com/TravLord/JavaScript\\_Projects/tree/main/ToDoApp](https://github.com/TravLord/JavaScript_Projects/tree/main/ToDoApp)
  - **C# :** To Do List Web App - MVC, .NET, Code First Entity Framework. A reproduction of my JavaScript ToDo list with multiple pages & search bar added.  
[https://github.com/TravLord/C\\_Sharp\\_Projects/tree/main/Basic\\_C%23\\_Programs/ToDoListAppV1](https://github.com/TravLord/C_Sharp_Projects/tree/main/Basic_C%23_Programs/ToDoListAppV1)
  - **C# :** Black Jack Console App - C#, Visual studio, SQL Database First Entity FW. One player vs. dealer card game with bet tracking included. All exceptions & cards dealt during the game are tracked. Tracking data auto-written to text files with time stamp & player ID for future analysis.  
[https://github.com/TravLord/C\\_Sharp\\_Projects/tree/main/Basic\\_C%23\\_Programs/TwentyOne\\_Game](https://github.com/TravLord/C_Sharp_Projects/tree/main/Basic_C%23_Programs/TwentyOne_Game)

## WORK EXPERIENCE

---

Software Developer Intern | Prosper IT Consulting - Portland, OR

April - May 2022

### **Project #1:** Vertigo Theater CMS Website Team Project -2 week sprint

- **Skills set** - ASP.NET, MVC, Code First Entity FW, Visual Studio, C#, HTML, CSS w/Bootstrap, Code First Entity Framework, Azure DevOps version control & project management, Agile, SCRUM methodologies.
- With a team of 5+ developers we contributed to the clients CMS company website, giving the user the ability to easily update the content on their website.
- I built the CRUD pages styled with CSS & Bootstrap cards to match the website's aesthetic layout.
- Created C# methods for converting image files to store & retrieve from the database. These conversion methods return the image to the view pages which then convert the image byte[] into a 64base string for display using Razor syntax.
- I created multiple C# helper methods. The method logic allows custom truncation of words or phrases, used in the program's library. These methods will be used throughout the entire development lifecycle.
- I Added a search bar to the index page. With C# I configured a method to display the relevant database results to the index page & hide the rest. The search criteria is based on item name or details keywords.
- 8 user stories completed producing 5 Razor/HTML web pages styled with CSS & Bootstrap, a database table of entities, 3 reconfigured C# controller methods & 2 C# program library helper methods.

### **Project #2 :** AppBuilder 9000 Web App Project - 2 week sprint

- **Skills set** - Django, MVC, Visual Studio, Python, JavaScript, HTML, CSS w/Bootstrap, Azure DevOps version control & project management, Agile, SCRUM methodologies.
- With a team of 10+ developers we contributed to the app used for tracking collectable items.
- Using Python I built & mapped the database model, built all layout files with DTL combined with HTML, added CRUD web pages with styling each with a consistent aesthetic look throughout.
- Used DTL & Python to map URL patterns & add all CRUD method logic for all template pages.
- Created a home gym blog page, the content on this page is web scraped from a fitness website the results are then parsed & displayed to the template page.
- I connected to an exercise API & retrieved & displayed selected response values to the web page.
- I added a Javascript slideshow, the slides display different gym equipment set ups to the user.
- 9 user stories completed producing 14 DTL/HTML files, 9 webpages, 10 python functions, 3 JavaScript functions.

Warehouse Operations Team Lead | Container & Packaging

2012 - Present

- **Skills set** - Logistics, Production software, Team management, interviewing, DevOps, Software update troubleshooting/optimizing, Team building meetings & communication.
- I assisted in software update rollouts as a user by finding bugs, communicating potential fixes or optimizations regarding them & creating tickets for I.T. review & prioritization.
- Configured the small parcel shipping area in an logistically efficient layout to increase outgoing shipment volume resulting in 95% of all orders shipping out within 24 hours of order placement.
- Organized the workflow & schedule of the small parcel team weekly to ensure benchmarks & production goals were constantly achieved.
- Assisted in interviewing/vetting potential employees & coaching/mentoring current employees.
- Ran team meetings focusing on improvements aligned with big picture company goals ensuring goals were accomplished & deadlines were met.

## EDUCATION & TRAINING

Certification in Software Development | The Tech Academy

May 2022

- Immersive boot camp with more than 600 hours of instruction & hands-on coding experience.
- Created over 50 web applications, console apps & games written in C#, JavaScript, Python, SQL, HTML, CSS using frameworks such as .NET framework, Django Framework.
- Learned and practiced Agile, Scrum, DevOps, CI & CD project management methodologies.
- Learned how to think & problem solve as a full stack software developer.
